

ComEd's Environmental Disclosure Statement

The disclosure of this information is required under Section 16-127 of the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission, 83 Ill Adm. Code 421.

Sources of Electricity Supplied for the 12 months ending June 30, 2003	Percentage of Total
Biomass power	0%
Coal-fired power	28%
Hydro power	0%
Natural gas-fired power	2%
Nuclear power	67%
Oil-fired power	0%
Solar power	0%
Wind power	0%
Other resources	0%
Unknown resources purchased from other companies	3%
TOTAL	100%

Sources of Electricity Supplied for the 12 months ending June 30, 2003

AVERAGE AMOUNTS OF EMISSIONS and AMOUNT OF NUCLEAR WASTE per 1000 kilowatt-hours (kWhs) PRODUCED from KNOWN‡ Sources for the 12 months ending June 30, 2003	
Carbon dioxide	623.73 lbs.
Nitrogen oxides	0.93 lbs.
Sulfur dioxide	1.47 lbs.
High level nuclear waste	0.0050 lbs.
Low level nuclear waste	0.0002 cubic feet

‡3% of the total electricity supplied was purchased from other suppliers and the amounts of emissions and amount of nuclear waste attributable to producing this electricity is not known and is not included in this table.

Additional information on companies selling electrical power in Illinois may be found at the Illinois Commerce Commission's World Wide Web site; www.icc.state.il.us.

The electric industry restructuring law passed in 1997 by the Illinois General Assembly provides many benefits for all customers. As part of this law electric utilities and suppliers are providing an Environmental Disclosure Statement for the twelve months ending every quarter.

The information on this statement shows the breakdown of the different sources that generated electricity for ComEd customers and the average amounts of emissions and nuclear waste produced, between 7/01/02 and 6/30/03.

For comparison purposes, the following shows the Midwestern states' (Illinois, Wisconsin, Michigan, Ohio and Indiana) electric utilities averages for sources of electricity generation and emissions for 1999.* 67 percent of ComEd's electricity is generated by nuclear power, and another 2 percent is generated by natural gas-fired power. Both nuclear power and natural gas-fired power have lower emissions of carbon dioxide, nitrogen oxides and sulfur dioxide than coal-fired generation. Because of that, our emission rates are 62% less than the regional average for carbon dioxide, 85% less for nitrogen oxides, and 88% less for sulfur dioxide.

(Midwest Sources—rounded to the nearest whole percent)

Coal-fired power	75%
Hydro power	1%
Natural gas-fired power	1%
Nuclear power	22%
Oil-fired power	1%
Renewables	less than 1%

(includes geothermal, biomass, wind, solar, thermal and photovoltaics)

(Midwest Emissions—pounds per 1000 kilowatt-hours)

Carbon dioxide	1,647.07 lbs.
Nitrogen oxides	6.35 lbs.
Sulfur dioxide	11.87 lbs.

ComEd's commitment to renewable energy helps place Illinois fourth in the U.S.

Over the past three years, ComEd's solar energy commitments have helped place Illinois fourth among all U.S. states with installed solar photovoltaic (PV) capacity. Only California with 15,383 kilowatts (kW), Arizona with 6,414 kW and New York with 1,421 kW are ranked ahead of the state.

Of the 1,202 kW installed throughout Illinois, 954 kW are located in ComEd's service territory, 80 percent of Illinois' total installed solar capacity. Helping develop this capacity are company-sponsored projects such as net metering which allows customers to sell excess generation produced from wind and solar electric systems back to ComEd.

In addition to supporting the net metering project and others, ComEd, the City of Chicago, and other sponsors, created the Chicago Solar Partnership to help promote renewable energy. The Partnership is a public/private venture responsible for solar installations on Chicago museums, schools, and city and other public buildings.

ComEd has dedicated \$12 million to support the development of clean solar energy over five years. The solar systems, including those already installed, will produce over 900,000 kilowatt-hours of electricity annually and spare the region's atmosphere approximately 1.9 million pounds of carbon dioxide per year.
